SUMMARY

Data Analyst with an MS in Health Informatics and 2+ years designing and maintaining ETL pipelines, BI dashboards, and automated reporting systems across government, pension fund, and healthcare environments. Skilled in SQL, Python, Power BI, and Databricks with a consistent track record of turning raw operational data into validated, executive-ready insights.

TECHNICAL SKILLS

Programming: SQL (CTEs, window functions, aggregations), Python (pandas, NumPy, matplotlib, seaborn), DAX, Git

Database and ETL: Databricks (Unity Catalog), PostgreSQL, BigQuery, SQL Server, MySQL, ETL Pipeline Development, Data Modeling

Business Intelligence: Power BI (DAX, Power Query, semantic modeling), Data Visualization, Excel (pivot tables, VLOOKUP, statistical functions), SAS JMP

EXPERIENCE

Data Analyst / Business Analyst Associate

Teacher Retirement System of Texas

September 2024 – Present

- Built and maintained ETL pipelines in Databricks using Python and SQL to automate data extraction, transformation, and loading across multiple source systems, replacing manual reporting with scheduled, validated outputs delivered to executive leadership and the Board of Trustees.
- Architected a Power BI semantic model using a star schema, developed DAX measures and Power Query transformations across four business units, and delivered a unified executive dashboard used in monthly leadership reviews.
- Identified a data integration gap between two enterprise systems, scoped and built an API-based pipeline in Databricks to close it, coordinated with IT on infrastructure requirements, and delivered downstream reporting dashboards for operations teams.
- Enforced data governance in the Databricks Unity Catalog, controlling row-level and column-level access to sensitive data and ensuring all analytical outputs met enterprise data standards before distribution.

Business Development Reporting Analyst Intern

Orlando Health

May 2024 – August 2024

- Analyzed 94,500 Epic EHR billing records in SQL, engineered scheduling accuracy flags, identified a \$64,000 monthly revenue gap, traced denial root causes to scheduling inaccuracies, and contributed to data-driven process changes generating 251 additional paid claims per month.
- Modeled the before-and-after financial impact of a Work Queue system rollout using claims data. Payment rates improved 1.3 percentage points and average reimbursement per case increased \$16.96.
- Designed and deployed a dual-audience Power BI dashboard with Before/After implementation filtering, STAT/Routine segmentation, and separate data views for clinical operations and finance leadership.

Member Information Specialist

Exos

June 2022 – February 2024

- Developed Power BI dashboards with DAX measures and Power Query transformations tracking population health KPIs across outcomes, utilization, and program performance for business unit leadership.
- Analyzed member engagement datasets using Excel statistical functions to identify churn patterns, segment program performance, and evaluate cost-effectiveness. Findings drove changes that improved program efficacy by 25%.

Release of Information Specialist

Verisma

January 2023 – August 2023

- Extracted, validated, and organized clinical data from Epic EHR for 1,000+ monthly medical records release requests, maintaining 100% HIPAA/HITECH compliance through data quality control on every disclosure.

EDUCATION

Nova Southeastern University

MS, Health Informatics — Emphasis in Data Analytics — GPA 3.8/4.0

August 2024

University of Central Florida

BS, Kinesiology

December 2021

CERTIFICATIONS

- Power BI Data Analyst Associate (PL-300) — Microsoft
- Google Data Analytics Professional Certificate — Coursera
- Lean Six Sigma Green Belt — Sterling Academy
- Business Analysis Certificate — UT Austin (IIBA-aligned)
